TransUnion Demo Site — Content Specification (Business-Centered Refresh)

Why this refresh

The current version is strong structurally, but the hero moment in **Flow 1** is still centered on **connector onboarding / rollout planning** rather than the business outcomes TransUnion is trying to drive. Internally, TransUnion conversations have centered on **enterprise + ITOps pilots**, a **45+ source environment**, and the need to prioritize use cases that improve efficiency, governance, and business impact. Publicly, TransUnion is also framing **OneTru** around **AI-powered growth, fraud, risk, marketing, consumer solutions, structural cost savings, and accelerated innovation**.

Figure 1 below shows the current demo flow leaning heavily into **deployment / onboarding** language, which is exactly the thing to de-emphasize for a first-meeting-driving demo.

Image: current TransUnion demo screenshot focused on onboarding plan

Figure 1: Current demo screen where the hero query is framed around onboarding systems into OneTru AI Assist rather than business-facing TransUnion outcomes.

Design principle for the new version

Keep the exact same **site pattern**:

- welcome modal
- persona picker
- left sidebar
- preloaded query
- show work
- cited answer
- source cards

But make each flow feel like: **“this helps TransUnion win in its own business”** rather than **“this helps TransUnion deploy Glean.”** That shift is important because TransUnion’s public AI narrative is about **governed analytics, OneTru-enabled innovation, fraud/risk outcomes, and operational leverage**, while internal discovery also surfaced strong interest from **enablement / training / solutions consulting** teams that need better synthesis across siloed systems.

TransUnion Demo Site — Content Specification

Format reference: aiformorningstar.com (same UI pattern)
Footer text: Prepared for TransUnion by the Glean team
Greeting name: Good afternoon, Jonathan (Jonathan Soto — AI Enterprise Service Owner)

This is a fictitious, hard-coded demo meant to feel like a real **Glean + TransUnion** experience, but the demo should now be anchored on **TransUnion business priorities and business use cases** — not on “how to deploy Glean.”

Global Config

- **Domain / Title:** aitransunion.com — “OneTru AI Assist × Glean”

- **Primary audience:**

    - Jonathan Soto (AI Enterprise Service Owner)
    - Bharat Kandanoor (VP Engineering | Architecture | AI | Security)
    - Security / governance leadership
    - Solutions Enablement / Commercial University leadership
    - Adjacent business / analytics stakeholders

- **Core narrative:**

    - TransUnion is already positioning **OneTru** as the platform that powers faster, more governed data access, analytics, and AI-driven innovation across **Credit, Marketing, Fraud, and Consumer Solutions**.
    - Internally, Jonathan and Bharat are gathering business requirements across **enterprise and ITOps**, trying to move faster across many systems while keeping governance tight.
    - Publicly, TransUnion is emphasizing **accelerated innovation**, **structural cost savings**, and **governed / explainable analytics**, including its new **AI Analytics Orchestrator Agent** on Google Cloud.
    - Therefore, Glean should be positioned in this demo as the **horizontal intelligence layer** that helps TransUnion teams make faster decisions across fraud, risk, operations, security, and revenue enablement.

Welcome Modal

- **Tagline:** Prepared for TransUnion by the Glean team
- **Logos:** Glean × TransUnion
- **Heading:** See what Glean could look like for OneTru AI Assist
- **Bullets:**
  - 🚀 Accelerate high-value use cases already on TransUnion's roadmap — from **governed analytics** and **fraud/risk workflows** to **service operations** and **field enablement**.
  - 🔍 Turn siloed internal knowledge into trusted answers grounded in **docs, tickets, decks, LMS content, and call recordings**.
  - 🔒 Support AI adoption in a regulated environment with **permission-aware access**, **citations**, and **auditable reasoning**.
- **CTA:** Show me how it works →
- **Sub-CTA:** This is a personalized demo — no login required

Landing / Persona Picker

- **Heading:** See what Glean could look like for TransUnion
- **Subheading:** Choose a perspective to explore
- **Persona cards (4):**
  1. **AI Platform & Business Prioritization**
     Subtitle: OneTru AI Assist leadership (Jonathan & Bharat)
  2. **Fraud, Risk & Analytics**
     Subtitle: TruIQ / fraud analytics / product strategy
  3. **Security, Risk & Compliance**
     Subtitle: Security strategy, governance, and data controls
  4. **Revenue & Enablement**
     Subtitle: Commercial University / solutions consulting / field teams

Shared Assistant Experience

- **Greeting (hero):** Good afternoon, Jonathan
- **Input box placeholder:** Ask about next use cases, fraud analytics, AI controls, or field enablement…
- **Tabs:** Chat | Search
- **Footer tagline:** Prepared for TransUnion by the Glean team

Each flow defines:

- Sidebar (TODAY + RECENT)

TODAY

- 2026 AI Use Case Prioritization

RECENT

- OneTru AI Assist — Pilot Feedback
- 2026 AI Strategy Readout
- Use Case Intake — HR / Finance / Fraud
- AI Governance Decision Matrix
- Commercial Enablement Pain Points
- Analytics Orchestrator Agent — Roadmap

Pre-loaded Query

Give me a recommendation for the **3 business use cases** we should prioritize next for OneTru AI Assist. Base it on:

- current pilot learnings;
- business impact;
- governance complexity;
- fit with TransUnion's 2026 priorities.

For each use case, summarize:

- who benefits;
- why it matters now;

- expected outcome;
- what makes it a good early win.

“Show Work” (hard-coded)

- OneTru AI Assist — Pilot Feedback (Confluence icon)
- 2026 AI Strategy Readout (PowerPoint icon)
- Business Intake — HR / Finance / Fraud (SharePoint icon)
- AI Governance Decision Matrix (Confluence icon)
- TransUnion AI Analytics Orchestrator Agent (Web icon)

Reading documents

- OneTru AI Assist — Pilot Feedback
- 2026 AI Strategy Readout
- AI Governance Decision Matrix
- TransUnion AI Analytics Orchestrator Agent

Synthesizing answer

- OneTru AI Prioritization Memo (Confluence icon)

Italic summary: Cross-referencing internal pilot feedback and governance materials with TransUnion’s public AI priorities to recommend the next 3 business use cases.

Output (Markdown)

Here are the **3 highest-priority next use cases** for OneTru AI Assist.

1. Governed analytics copilot for fraud / credit teams

- **Why this should come first:** it aligns directly with TransUnion’s public push toward **auditable, explainable, governed analytics** and builds on the same momentum as the new Analytics Orchestrator Agent.
- **Who benefits:** fraud analysts, risk analysts, product managers, and analytics leaders.
- **Expected outcome:** faster investigation cycles, less dependency on specialist data science support, and better reuse of internal analytic know-how.
- **Why it’s an early win:** high strategic value, clear executive story, and strong fit with TransUnion’s public narrative.

2. Revenue & enablement assistant for sellers and solutions consultants

- **Why this should come second:** internal discovery already showed strong interest from enablement teams that need better synthesis across product docs, training, proposals, and call recordings.
- **Who benefits:** solutions consultants, sellers, proposal teams, and new hires.
- **Expected outcome:** faster ramp, stronger consistency, better meeting prep, and fewer “where do I find that?” bottlenecks.
- **Why it’s an early win:** the pain is concrete, the content already exists, and the demo value is immediately obvious.

3. Security / policy copilot for AI governance and sensitive-data expansion

- **Why this should come third:** sensitive data access is a gating issue for Salesforce, finance, and other higher-value domains, so governance acceleration unlocks the rest of the roadmap.
- **Who benefits:** security, compliance, architecture, and AI governance stakeholders.
- **Expected outcome:** faster reviews, clearer approval paths, and more confidence expanding AI into sensitive workflows.
- **Why it’s an early win:** it supports the entire program, not just one department.

Bottom line: this framing lets the demo tell a stronger story than “here is how we would onboard tools.” It says: **here is where OneTru AI Assist creates measurable leverage next.**

TODAY

- Near-Prime Auto Risk — Synthetic Identity Review

RECENT

- Analytics Orchestrator Agent — Reusable Workflows
- Partner Escalations — Auto Originations
- Fraud Feature Performance — Q1
- Attribute Catalog — Synthetic Risk Signals
- Risk Committee Notes — Explainability
- TruIQ Product Strategy — Self-Service Analytics

Pre-loaded Query

A lender partner is seeing rising **first-payment default** and possible **synthetic identity risk** in near-prime auto originations.

Pull together the relevant model notes, attribute definitions, partner escalations, and governance guidance, then recommend:

- the most likely drivers;
- the first 3 analyses we should run;
- the first interventions we should test.

“Show Work”

Searching company knowledge
Q synthetic identity auto originations first payment default attribute drift explainability

- Risk Committee Notes — Explainability Standards (SharePoint icon)

- Analytics Orchestrator Agent — Workflow Library (Web icon)

Reading documents

- Fraud Feature Performance — Q1
- Attribute Catalog — Synthetic Risk Signals
- Partner Escalations — Auto Lending
- Risk Committee Notes — Explainability Standards

Synthesizing answer

- Auto Lending Risk Analysis Brief (Confluence icon)

Italic summary: Cross-referencing model context, partner feedback, and governance standards to propose a governed next-step analysis plan.

Output (Markdown)

Here's a focused working brief for the near-prime auto risk spike.

1. Most likely drivers

- Drift in a small set of **identity consistency** and **thin-file behavioral** attributes.
- A higher share of applications entering from partner / channel combinations with historically noisier applicant profiles.
- Recent policy tuning likely improved conversion, but may have widened the range of applicants entering manual review or approval bands.

2. First 3 analyses to run

1. **Attribute drift analysis** on the top synthetic-risk features for the last 30–60 days.
2. **Channel / partner decomposition** to isolate whether the spike is concentrated in a narrow acquisition cohort.
3. **Adverse-action / explainability review** to confirm any intervention can be defended clearly to internal governance and customer teams.

3. First interventions to test

- Tighten review thresholds for the highest-risk synthetic indicators in the affected segment.
- Add a targeted step-up identity check only for the riskiest cohort, rather than broad friction.
- Package the workflow into a reusable analyst playbook so future teams can run the same investigation faster.

4. Why this is a strong demo moment

This flow shows Glean helping TransUnion do something much closer to its actual business: **speed governed analytics and risk decision-making**, not just search across tools.

- AI Governance Steering Committee — Deck (PowerPoint icon)

Reading documents

- AI Risk Assessment — OneTru AI Assist
- Data Classification & Handling Policy v3.2
- Security Exceptions — Q4 2025
- Vendor Security Review — Glean

Synthesizing answer

- Sensitive Data Expansion Brief (Confluence icon)

Italic summary: Cross-referencing security, policy, and governance materials to define what “ready for expansion” should mean.

Output (Markdown)

Here’s the readiness brief for expanding OneTru AI Assist into more sensitive domains.

Required controls

- confirmed classification coverage on target repositories
- permission-aware access mirrored from source systems
- audited prompt / answer logging
- clear approval path for any workflow touching regulated or high-sensitivity data
- explainability standards for any analytics-derived outputs

Current gaps

- uneven classification coverage on some repositories
- incomplete agreement on what “approved” AI use looks like by business function
- unresolved logging / SIEM integration questions for broader expansion

Recommended decision gates

1. No expansion until targeted repositories meet classification-readiness threshold.
2. No sensitive-domain rollout without agreed monitoring / logging pattern.
3. No business launch without named owner for governance, incident response, and exception handling.

3 actions for the next Steering Committee

1. Approve a formal expansion rubric for sensitive systems.
2. Finalize AI acceptable-use standards by function.
3. Standardize logging and anomaly-detection expectations for approved AI vendors and internal agents.

TODAY

- Regional Bank Call Brief — Fraud & Identity

RECENT

- Commercial University — Core Curriculum
- Fraud & Identity Messaging Framework
- Approved Proposal Library — Financial Services
- Gong Playlist — Top Fraud / Credit Calls
- Competitive Intel — Experian & Equifax
- OneTru Enablement FAQ

Pre-loaded Query

I'm preparing for a meeting with a regional bank that cares about **fraud prevention, identity, and credit risk**.

Build me a concise **seller / solutions consultant call brief** that pulls from:

- approved messaging;
- relevant training content;
- past Gong calls;
- proposal snippets;
- competitive intel.

Include:

- the best value story;
- 3 proof points to use;
- likely objections;
- the best follow-up asset to send.

- Proposal Library — Financial Services (SharePoint icon)
- Competitive Intel — Experian & Equifax (SharePoint icon)

Reading documents

- Fraud & Identity Messaging Framework
- Commercial University — Core Curriculum
- Gong Playlist — Fraud / Credit Calls
- Proposal Library — Financial Services

Synthesizing answer

- Regional Bank Call Brief — Fraud & Identity (Confluence icon)

Italic summary: Cross-referencing training, messaging, call history, and proposal content to build a field-ready brief.

Output (Markdown)

Here’s the call brief.

Best value story

TransUnion wins when it helps customers make better risk decisions with more confidence and less friction. Position the conversation around:

- faster, more explainable decisions
- stronger fraud / identity confidence
- practical operational lift for analysts and client teams

3 proof points to use

1. TransUnion’s strength comes from combining **trusted data assets**, **analytics expertise**, and **governed AI**.

2. The conversation should emphasize **transparency / explainability**, not just speed.
3. Frame OneTru as the way TransUnion scales reusable intelligence across teams and use cases.

Likely objections

- “How is this different from a generic AI tool?”
- “How do we keep outputs explainable for regulated decisions?”
- “How do we avoid adding more tool sprawl for field teams?”

Best follow-up asset to send

Send the most concise, approved **fraud / identity value one-pager** plus one proof-heavy case example that reinforces governed analytics and business outcomes.

Why this is a better meeting-driving demo

This is exactly the type of workflow Elizabeth / Corinne described: pulling together **multiple sources of training, product, and field content**, synthesizing it, and making it immediately useful for the person doing the work.

---

Implementation Notes for Cursor

Reuse the **same Morningstar / current TransUnion implementation pattern** with minimal UI changes:

- citation numbers: same blue circle superscripts
- same left sidebar layout
- same 3-stage show work flow: **Searching** → **Reading** → **Synthesizing**
- same source card layout
- same “Prepared for TransUnion by the Glean team” footer

Important change

The **first card / hero flow** should no longer be “data onboarding plan” or anything that sounds like a deployment workback. It should be the **AI Platform & Business Prioritization** flow above.

If you want the smallest-diff version

If engineering time is limited, the highest-impact update is:

1. replace **Flow 1** entirely
2. replace **Flow 4** with the new revenue / enablement brief
3. leave most of the UI and mechanics unchanged

Final recommendation

If the goal is to get TransUnion to take the next meeting, the site should tell this story:

Glean helps OneTru AI Assist create business leverage across TransUnion’s actual world — governed analytics, fraud / risk workflows, AI governance, and field enablement — not just connector rollout planning.
